

Subject: Miltenyi Biotec: Career Opportunities in Maryland

Here are further details about the positions we have available in the state of Maryland.

Please, forward it to the postdoctoral fellows in your network, - thank you.

I would strongly encourage interested/curious parties to apply or contact me at 530-887-5304 with any questions.

Miltenyi Biotec is a global leader in magnetic cell separation within the Life Science industry. Our trademark is MACS; there are quite a few investigators at NIH, Johns Hopkins, and etc. who are directly using our products in their research.

Currently we are looking for Scientists:

- with Molecular or Cellular Biology or Immunology expertise—preferably with Ph.D. or M.S. degree
 - motivated to transition from laboratory/bench work into consultative very technical sales position
 -
 - to introduce our company's research core products to customers in academic and biotech research centers
- We are willing to teach and train the right person, provide the tools they'd need to be successful in this position, but we couldn't teach them science expertise nor could we teach them to be curious about the research our customers are doing.
- The representative must have strong science background to understand how our product line can impact scientists' research.

We are not looking for an experienced sales person with strong sales background who happens to know some science. We are seeking a Scientist with desire to break into the biotech industry, technically consult top principal investigators in the country and be challenged to drive the business.
